Software Engineer with 2+ years building backend systems in Java and Spring Boot, specializing in microservices, REST APIs, and cloud-based order management platforms on GCP.

EDUCATION

SIES Graduate School Of Technology **Navi Mumbai, Maharashtra**

Bachelor of Engineering in Information Technology (with Honours in Blockchain)July 2020 – March 2024

M.H Junior College **Thane, Maharashtra**

HSC – Science *July 2018 – March 2020*

EXPERIENCE

Software Engineer **Aug. 2025 – Present**

Ingram Micro Platform Technology India Private Limited *Mumbai, Maharashtra*

X4C / X4A (Order Status & Tracking – Backend, Java/Spring Boot/Microservices)Dec. 2024 – Present

- Resolved B2B bugs and delivered B2B enhancements, building new REST APIs (CRUD) and adding new fields in the API layer.
- Resolved vendor issues across the top 10 vendors, including Lenovo, Apple, Cisco, and others.
- Delivered reporting enhancements: supported UAT bug fixes, enabled new order reporting, resolved translation issues, handled UAT issues, and built a single unified query across the Open Order, Last Day Shipment, and All Order reports.
- Resolved bugs and production incidents while delivering new business requirement features for the engine layer.
- Contributed to vendor integration for onboarding new vendors in the EMEA region.
- Enhanced tracking details for Lenovo in the Orders module.
- Improved unit test coverage (JUnit) for OST repositories to 80%.

X4V (Xvantage for Vendors – Orders Module, Java, Spring Boot) ***May 2025 – Present***

- Resolved data mismatches and order issues while improving API performance.
- Enhanced Excel download functionality with new features for multiple countries.
- Modified Elastic/Kibana templates and indexes; worked with GCP Pub/Sub, Datadog monitoring, and Cloud Scheduler jobs.
- Optimized X4V list page performance and delivered new enhancements including tracking, pre-shipment, and ASN.
- Led on-prem to GCP migration for X4V using OST DBs.
- Supported the Apigee to Akamai URL transition.

Trainee Software Developer **July 2024 – July 2025**

Ingram Micro Platform Technology India Private Limited *Mumbai, Maharashtra*

- Contributed to a report harmonization project (ETL tool) converting semi-structured text reports into structured Excel files (.xlsx).
- Developed Python scripts to process business reports (PUP, ARP, APP, etc.) across India and China regions, generating configuration files.
- Supported automated workflows using Task Scheduler to run Python jobs efficiently.

PROJECTS

Expense Tracker System | *MongoDB, React, Express, NodeJs*

- Created an expense tracking application with features like add, edit, delete for expenses.
- Implemented frequency based tracking: last 5 days, weekly, monthly analysis.
- Implemented a category-wise dashboard showing income vs. expenses for easy analysis.

Tour and Travel Hiking Website | *PHP, MySQL, HTML, CSS, JS*

- Developed a website to promote tourism and hiking activities.
- Showcased tourism packages and adventure activities like paragliding, river-rafting, etc.
- Provided information on travel essentials and shopping for hikers and tourists.

Gemini Clone | *React*

- Developed a Gemini AI clone using the Gemini-1.5 Flash Model and React for the frontend.

TECHNICAL SKILLS

Languages: Java, SpringBoot, Microservices, REST APIs, SQL (Postgres, MsSQL), Python Basics
Developer Tools: Git, IntelliJ, Eclipse, VS Code, Postman (API development, testing)
Cloud and Monitoring: Google Cloud Platform (GCP Basics), Datadog, Elasticsearch, Kibana
Methodologies: Agile/Scrum
